

Lifetime Group

Defining the dws platform Business Case

- Given the engineering at scale requirements (this global transformation project is enormous)
- in a 8,5 years time window for
- developing sustainable global hydrogen ecosystem end-to-end with
- efficient Quantum ML/AI models and [Lifetime Digital Workspace Platform for its Fleet Management](#) to
- manage the new fleet to ensure and prevent climate change happening and going above 1,5 degrees rise of temperature, with a solution including
- 100 billion IoT streaming devices in the productions pipeline from hydrogen manufacturing (windmill farms, solar, nuclear, gas), logistics (motorcycles, cars, busses, aeroplanes, ships), storage (mines, underwater silos, battery packs), localising (infrastructure and piping, gas stations), and finally turning hydrogen into electricity (devices, applications, appliances, services) at the right time and in the right moment and ensuring
- World-Wide availability of the solutions ecosystem when fully replacing Coal and fossil fuels.

How do we create value - imagine that

Every Enterprise is producing data, knowledge and experiences CX, EX, PX, OX, LX, UX, TX; both as a result of administrative processes and as part of their daily interaction with their customers and partners.

Today, the data from experiences and knowledge is becoming an increasingly valuable asset, where one could create substantial actionable insight when the data is understood and leveraged to its full potential, ideally earlier and better than the competitors.

Lifetime Group together with its partner ecosystem is among the leaders in the deployment of AI and usage of associated services such as AWS Machine Learning, Kubernetes containers, cloud native microservices, serverless.

We are supporting the transition to a digital and sustainable economy.

Lifetime Group helps companies to turn this extremely valuable data into even more valuable knowledge assets and generate tangible business value from data and build in depth knowledge from it.

The Six Focus Areas for company to become an insight driven organisation in the sustainable economy age

1. Engage your people - build a deep understanding of data by creating hands-on experience across the business with partnership certification programs guided by our advisors.
2. Hire the Best competency on the Planet - have access to a core people who understand and upskill the set of deep level AI expertise at their work daily to complement your subject matter experts.
3. Hybrid Data Strategy - have the right data collected, sorted and turned into in-depth knowledge available at the right time wherever needed, whether in-house, at customer location, at the device edge network.
4. Lifetime Certified Partners Consortium sorts and finds the best in class competency, augment companies on competency to secure the possibility to move all the way from proof of concept to scaled out production of AI solutions to bring out the real business value from data.
5. Have access to high quality data, not only in house, but also across the Corporation sites. Our data and value exchange platform Lifetime Digital Workspace gen. dws4 is specifically

Lifetime Group

designed for enabling value-chains and ecosystems where industrial use-cases can happen and in which companies maintain control of their own data.

6. The Tooling experience TX with Artificial Intelligence (AI) and machine learning (ML) is growing in importance. At Lifetime Group we're building more and more amazing AI/ML solutions with mobile apps in automated DevOps hydrogen economy and hydrogen distribution logistics.

The screenshot shows the IBM Quantum dashboard for user Risto Anton. The header is black with the IBM Quantum logo and name. The main content area is light gray and features a welcome message. Below this, there are three main action cards: 'Launch Composer' for building circuits, 'Launch Lab' for developing experiments, and a section for API tokens. At the bottom, there are two summary cards: 'Run on circuits & algorithms via IBM Quantum services' showing counts for various metrics, and 'Recent jobs' showing no recent activity.
